Bhoomika Nidagundi

Ph- no: 6363361265 bhoomika06@gmail.com Bangalore

Professional Summary

SDE-II Backend Engineer with 3 years of experience designing and building scalable, distributed systems using Java, Spring Boot, and Azure. Experienced in microservices architecture, event-driven systems, and building reliable production-grade backend applications.

Experience

Software Developer-II, Fastenal - Bengaluru **July 2023 – Present**

- Architected and implemented a distributed Mass Load system capable of processing up to **10M SKUs daily**, decomposing the workflow into independently scalable microservices for improved fault isolation and resilience, increasing overall throughput by **70%**.
- Optimized item creation and persistence workflows handling up to **10M records daily** across multiple storage systems and cross-team integrations, achieving **99.9% data reliability** and consistency.
- Migrated Windows Service–based scheduled jobs to serverless Azure Functions, improving scalability and reliability while reducing processing time by **40%** and enabling automated failure monitoring.
- Developed a responsive frontend using Angular, TypeScript, and PrimeNG, enabling efficient product search, viewing, and maintenance with seamless end-to-end API integration.
- Designed and implemented a high-throughput **real-time event notification system** using Azure Web PubSub (publish–subscribe architecture), achieving low-latency delivery with **99.9% reliability**.
- Strengthened application security by implementing cookie-based authentication using Duende BFF and improving overall code reliability through comprehensive unit and integration testing (**40%** coverage increase).
- Implemented CI/CD pipelines in Azure DevOps and modernized Angular and Spring Boot applications to the latest LTS versions, improving deployment consistency and reducing deprecated dependencies by **30%**.

Technical Skills

Languages: Java, Go, C++, C#
Backend: , Micro services ,Spring Boot (MVC, JPA, Hibernate), REST APIs, Event-Driven Architecture
Databases & Others: PostgreSQL, MongoDB, Redis, Apache Kafka, ActiveMQ
Cloud & DevOps: Azure (Functions, Web PubSub), Docker, Azure DevOps (CI/CD), Git
Frontend: Angular, TypeScript, PrimeNG

Projects

Distributed E-Com Microservices Backend

- Designed a domain-driven microservices architecture (Product, Order, Payment, Identity) with independent data stores and clear service boundaries.
- Implemented asynchronous order–payment workflows using Kafka to enable loose coupling and eventual consistency across services.
- Optimized performance using Redis caching and containerized services with Docker for scalable, reproducible deployments.

Scalable URL Redirection Service

- Designed and built a low-latency URL redirection service with collision-resistant short code generation and idempotent URL mapping.
- Used Redis caching to achieve sub-50ms average response time and reduce database load.
- Containerized with Docker and designed for horizontal scalability and extensibility (rate limiting, analytics, expiry).

Education

Birla Institute of Technology, Mesra **July 2019 – May 2023**
